

**IN THE SPECIFICATION:**

Replace paragraph [0017] with the following:

As best shown in FIG. 1, a hopper 20 is associated with the body 12. The hopper 20 is constructed and arranged to receive aggregate material such as stone from a source of aggregate material, for example, a dump truck. At the front of the body near the hopper, push rollers 22 are provided and are used in engaging the tires 23 of a dump truck 25 (FIG. 3) as the apparatus 10 pushes the dump truck forwardly while spreading the stone. The push rollers 22 are preferably hydraulically adjustable towards and away from the body 12. Rolling and swiveling casters 26 are provided, preferably on a center-pivoting walking beam 45, so as to pivot therewith to maintain contact with the road while the apparatus 10 spreads stone.
